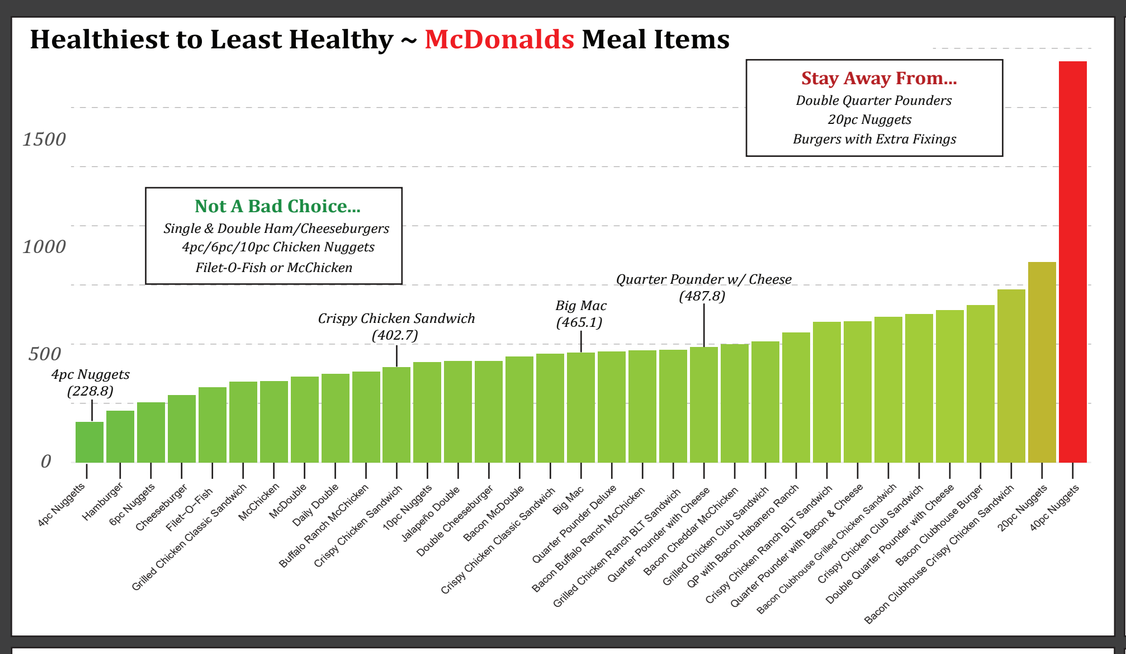
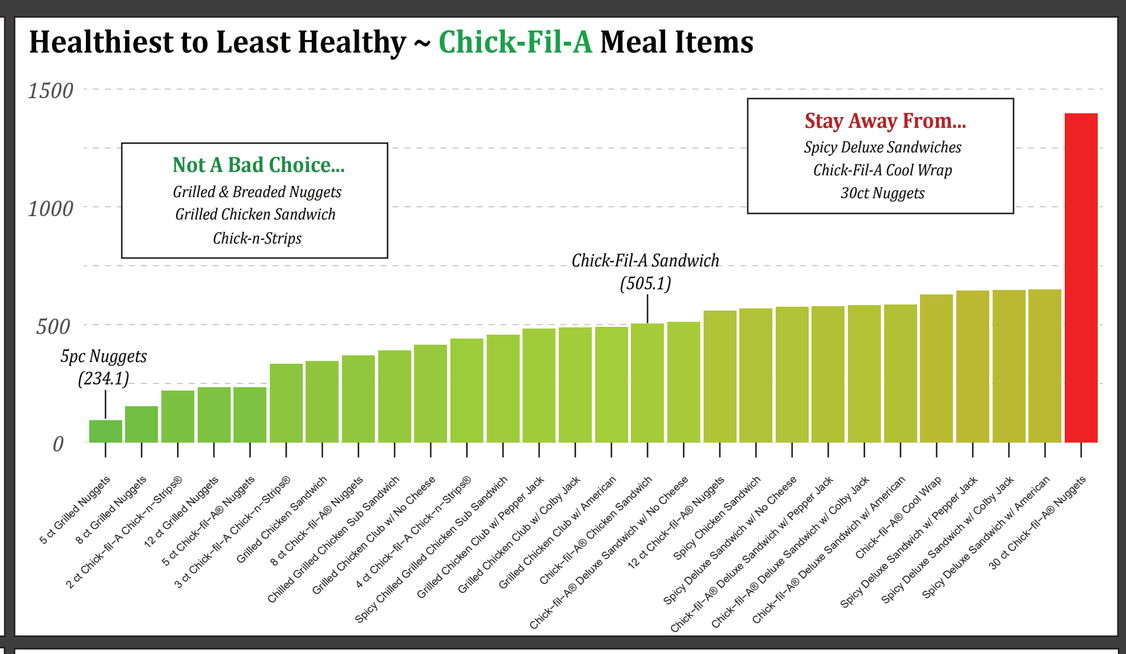
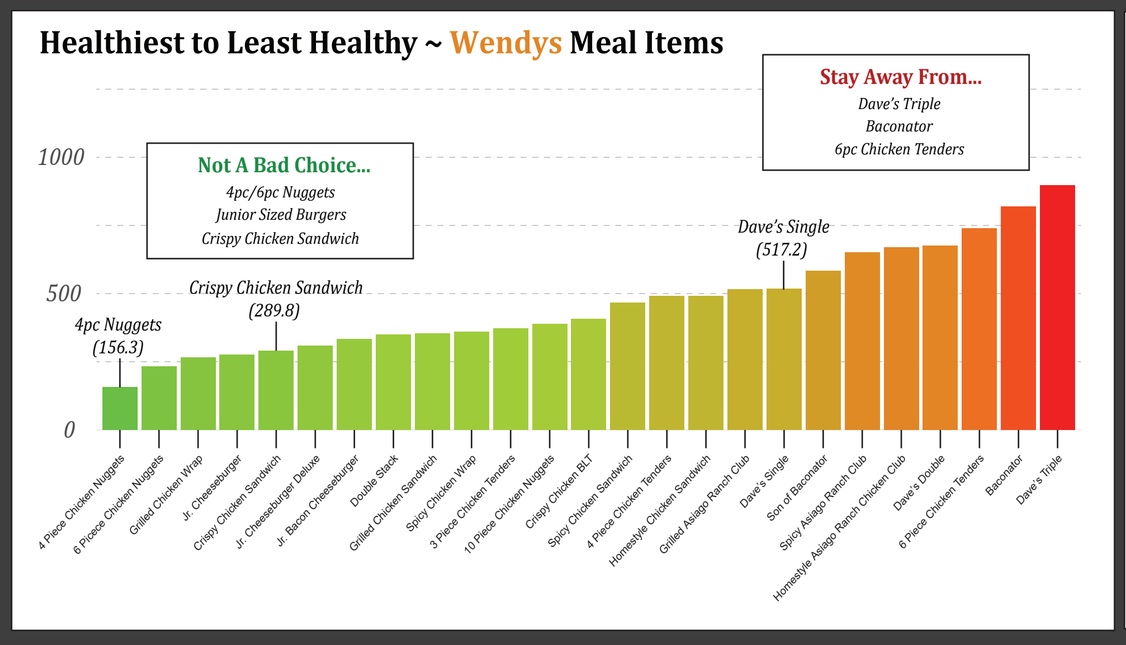
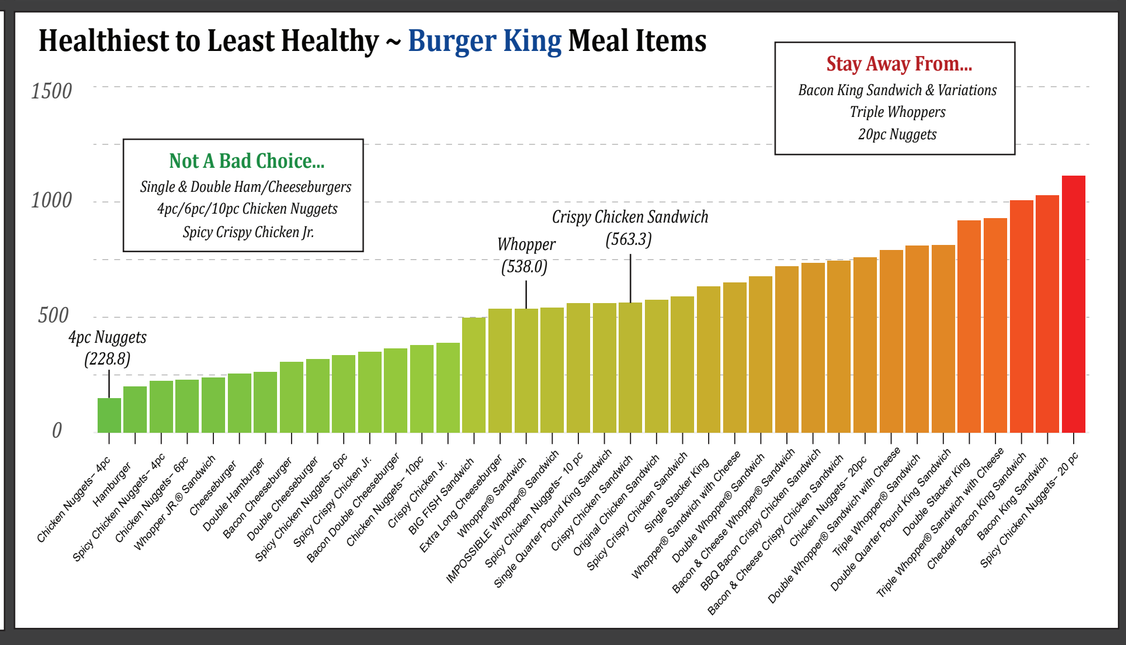
Fast Food Restaurants: Who To Choose?

When we go out and about in our local neighbourhoods, there is a never ending stream of fast food restauraunts to choose from. However, do we really know the breakdown of what we're eating? Or what is truly the healthier option? Broken down below is insight into four of the most popular.



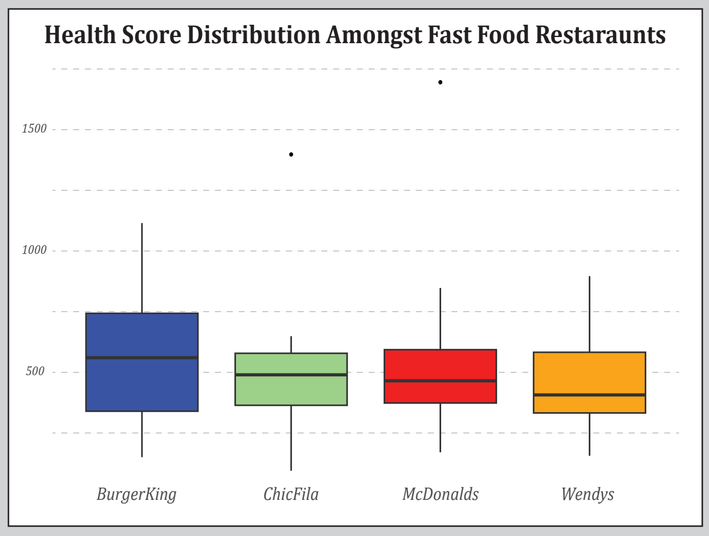






(Calories * 0.5) + (Fat * 0.3) + (Sodium * 0.2) = Health Score

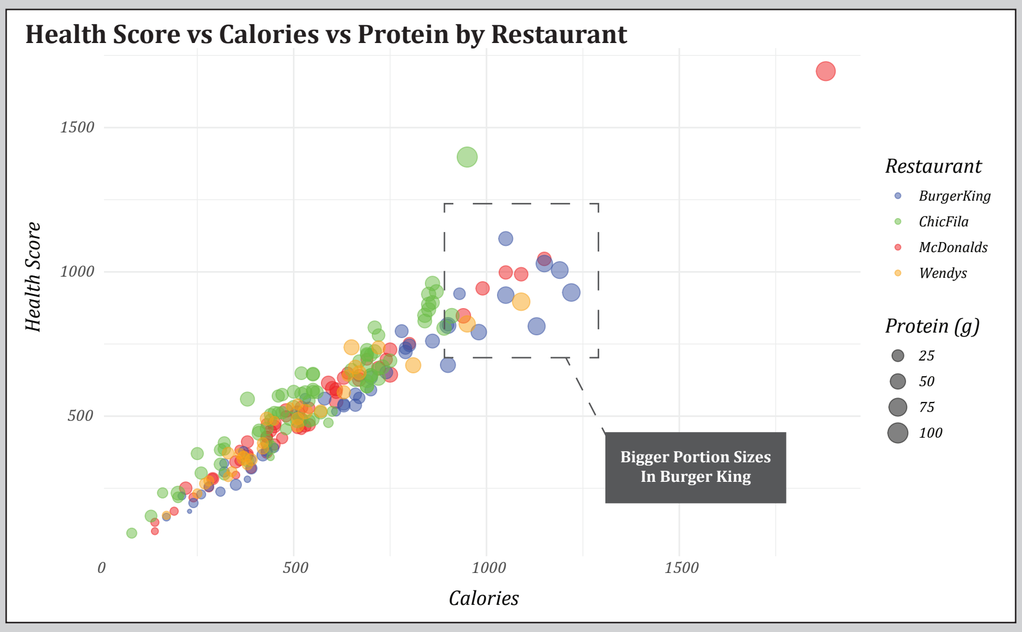
The Health Score was calculated with the idea of highlighting negative attributes. However, it is important to keep in mind it does not account for protein or portion sizes.



Distribution Results

The boxplot shows us that Burger King has the widest distribution of Health Score while Wendys has the lowest Median score. While it is interesting results. It needs some context.....

So What About Protein?



The graph above shows that Burger King's vs McDonald's items have a disparity between protein levels. The dotted box highlights that items with similar calorie and health scores actually have a higher protein level at Burger King.
It is almost important to note that as there is a positive coorelation between calories and amount of protein.

How about Portion Sizes?

	4pc Chicken Nuggets	Burger 1	Burger 2	Chicken Sandwich
Burger King	2.59 score/g	1.18 score/g WHOPPER	–	2.61 score/g
McDonalds	2.75 score/g	2.17 score/g BIG MAC	2.22 score/g QUARTER LBer	2.52 score/g
Wendys	2.30 score/g	2.30 score/g	–	2.56 score/g
Chick-fil-a	3.34 score/g	–	–	2.76 score/g

In the table above, we are able to see the breakdown of Health Score by gram, given that there are portion size disparity. We make some keep discoveries within this breakdown.

1. Chick-Fil-A actually has the "unhealthiest" nuggets.
2. Chick-Fil-A also has the "unhealthiest" chicken sandwich.
3. Burger King has the "healthiest" burger

While Chick-Fil-A is generally considered as being the healthiest, it came back with the highest score per gram.
